# QMUZIK TRACKING

Business Process Solutions

WHO USES THE SOLUTION?

- Risk Managers
- Supply Chain Managers

# Qmuzik Tracking (QT)

QT works with you to create a solution that is process driven, not functional. This means we start by defining your processes and then creating the necessary templates for them in order to manage everything from beginning through end-to ensure efficiency at every stage.

QT is a game-changing approach to managing business processes that can be used anywhere and any time. It's easy enough for anyone who has an idea, no matter how vague or simple it may seem - with QT you'll never have trouble getting started on your project.

## BENEFITS

- ✓ Full visibility on all processes.
- ✓ Optimise business processes.
- ✓ Full traceability and accountability.
- ✓ Simplified data capturing with wizards.
- ✓ Simplified production floor/transactional activities.
- ✓ Minimizes risk.

## SYSTEM FEATURES

- ✓ Map out process flows.
- ✓ Define roles and responsibilities.
- ✓ Setup alerts and notifications.
- ✓ Design web and/or windows forms input forms.
- ✓ Define process relationships (sub-processes, flow dependencies).
- ✓ Register business objects for execution at a certain point in the process (multiple objects can be executed).
- ✓ Map process data inputs to business objects (and setup defaults).
- ✓ Configure process flow business rules.

## FEATURE HIGHLIGHTS

### ✓ EXTENDED EVENT ENGINE (3E)

The 3E is a collection of reusable business objects that have been around since the beginning and still serve as our foundation for building powerful software today. QT is an extension of the 3E. The power lies in its ability to invoke and expose all business objects.

### ✓ FUNCTIONALITY OF 3E

You can re-use vast amounts of existing system functionality for complex processes, such as:

- Engineering Management
- Contract Management
- Material Requirements Planning (MRP)
- Project Management
- Procurement Management
- Production Management
- Inventory Management
- Financial Management
- Requisitions
- Asset Management

### ✓ KEY FEATURES OF 3E

- Configure Client Specific processes
- Set up alerts, escalation thereof and notifications
- Launch follow up processes on alerts i.e. resolve alert conditions with a predefined process
- Manage sub-processes, flow dependencies and relationships
- Assign unambiguous responsibility
- Web enabled
- Execute business processes
- Powerful rules engine direct complex flow decisions
- Barcode scanning enabled
- Associate other files/documents with your process instances
- Barcode label printing
- Full audit trail
