

## ASSET MANAGEMENT

Qmuzik provides comprehensive functionality to manage assets. Asset management integrates seamlessly with other business functions such as financials and workflow. The following asset management functionality is provided:

**Asset Acquisition:** Capital assets may be procured either through purchase orders or through capitalising of projects via hand journals.

**Asset Grouping & Structures:** Unlimited asset groupings, parent-child asset relationships and multi-level serialised asset component structures are available.

**Asset Location & Tagging:** Assets can be allocated and tracked within specified zone and location structures.

**Asset Responsibility Roles:** Various responsibilities linked to an asset.

**Asset Loan:** Workflow enabled loan and control of specific assets.

**Asset Count:** Record assets count results with location and quantity confirmation.

**Asset Adjustments:** Take-on-value amount changes are allowed and adjustments for depreciation differences are accounted for.

**Asset Depreciation Runs:** Automated simulation and live depreciation runs which produce real time journals.

**Asset Financial History:** Complete visibility of financial history for each asset

**Asset Status:** Complete tracking of Asset through lifecycle.

**Asset Bulk Review:** Bulk function available for annual review purposes.

**Asset Tax vs. Accounting Values:** Detail tax information available similar to all accounting values for wear and tear purposes.
